KEY FINDINGS

Some of the findings from the analysis are :

- 1. California is the state with highest number of companies in the US, there is possibility of finding a job quicker in California than other state.
- 1. The top five industries with highest revenue in the state include health ,business, software, construction and logistic. If one is looking to invest or looking for a job that pays more, those industries are doing well in the state.
- 1. The top five industries with highest number of workers in the state are security, business, human resources, health and food.
- 1. State such as Mississippi, Hawaii, Vermont, Wyoming, and Rhode island does not have much companies, getting jobs in those states would be difficult.
- 1. Competition for jobs in states such as California, Florida, Texas and New York would be very high due to the rate at which everyone one want to work with the industries
